Ethics for Authors and Volunteers: Things You Should Know Before Submitting Your Next Paper
Presentation at ICIP 2016, Phoenix, AZ.

The presentation was particularly addressed to new authors with little experience about the IEEE publication workflow and principles, and focused on the dos and don'ts for successfully publishing a technical paper. It offered an overview of peer-review process in IEEE journals and discussed the ethics and etiquette standards that authors are expected to uphold and that reviewers and editors are looking for. Topics included: choice of the publication venue, authorship, fair reporting of own and others' results, appropriate disclosure and referencing to own previous work, appropriate description and citing of prior work, plagiarism, duplicate submissions, inappropriate replication, and bibliometric manipulation. The session was well attended (more than 80 registered participants, mostly PhD students) and lunch was offered.
