

CALL FOR PROPOSALS
IEEE ISBI 2025

Deadline EXTENDED: **1 February 2023**

The IEEE ISBI Steering Committee is accepting proposals in all regions for the 2025 IEEE International Symposium on Biomedical Imaging (ISBI). Proposals for this symposium shall be planned as a physical in-person conference, with an online component for additional remote attendees.

The IEEE International Symposium on Biomedical Imaging (ISBI) is the premier forum for presenting technological advances in theoretical and applied biomedical imaging. ISBI has played a leading role in facilitating interaction between researchers in medical and biological imaging. The future meetings will continue this tradition of fostering cross-fertilization among different imaging communities and contributing to an integrative approach to biomedical imaging across all scales of observation.

IEEE Engineering Medicine and Biology Society and IEEE Signal Processing Society Members are invited to submit a proposal to host and organize ISBI 2025. If you are interested in submitting a proposal, please review the [ISBI Proposal Guidelines](#) and complete and submit the [ISBI 2025 Proposal Pre-Screening Form](#) by **1 February 2023**.

The ISBI Steering Committee will assess submissions to determine the final proposing teams. Finalists will be invited to prepare full proposals and, if approved, asked to present them during an ISBI Steering Committee meeting held in April 2023.
