

Tips & Tricks Article Title

Manuscript Author(s)

I. BACKGROUND

One paragraph describing the main idea, similarly to a paper abstract. For this Latex template, font-size, line spacing, and margins are automatically adjusted as a function of the IEEEtran.cls class file. Nevertheless, there are some other points requiring your attention: Tips&Tricks Articles are neither expected to cross the 10-page limit nor to cross the limit of 4 Figures included. In addition, up to 12 references are allowed, and excessive math should be avoided!

II. THE TIP(S) AND/OR TRICK(S)

The main text where the tip(s) and/or the trick(s) is(are) clearly defined and explained, in a practical perspective. Subsections might be used.

III. NUMERICAL EXAMPLE

A few paragraphs providing a numerical example, preferably to be followed by hand, whenever possible. If that is impracticable, then the section could be renamed to “Computational Example” in order to describe an example accordingly. This section is not mandatory, however, it is strongly recommended.

IV. CONCLUSIONS

One paragraph containing the conclusions and emphasizing the importance of the tip(s) and/or the trick(s) provided.

V. AUTHOR

~ 100 words for each author

REFERENCES

[1] up to 12 references, in the IEEE ordinary format.
