**\*Eigenfactor Scores** are recent additions to the Journal Citations Report. The scientist who devised the Eigenfactor Score is Carl Bergstrom, who states at his web site "using data primarily from ISI, the source of the Science Citation Index (SCI) and the Thomson Reuters Journal Citation Reports (JCR), Eigenfactor.org calculates an importance variable (called an Eigenfactor) for each journal. The Eigenfactor Score is a measure of the journal's total importance to the scientific community, using an iterative algorithm to weight citations (similar to the PageRank algorithm used for Google.)"

**\*\*Article Influence Score (AIS)** is also a relatively recent addition to the IEEE JCR report. It too was developed by Bergstrom, also with data primarily from SCI and JCR. The AIS is meant to represent the relative importance of the journal on a per-article basis. Bergstrom describes the journal's Article Influence Score as "a measure of the average influence of each of its articles over the first five years after publication." To find out more about the both the Eigenfactor score and the AIS score visit the web site <http://www.eigenfactor.org>, with FAQs at <http://www.eigenfactor.org/faq.htm>. You can visit Bergstrom's academic web page at <http://octavia.zoology.washington.edu/>.
